

INTRODUCING A NEW KIND OF COLD STORAGE
**ACCESSIBLE
 COLD
 ENVIRONMENTS®**

The KPS Global Accessible Cold Environments, ACE® unit is an **innovative solution to loading and accessing perishable goods.**

This **groundbreaking technology** is the first open front refrigerated solution to hold product temperature 40°F and below in the product storage areas without using glass or solid doors to keep heat out of the space.

The ACE unit features a **patent-pending triple air curtain** that helps it maintain temperatures while providing easy access to refrigerated bulk items.

Loading and restocking product is quick and efficient with the **unique vertical lift system** that allows full pallets of product to be positioned in the chilled environment, which significantly decreases load times.

ACE is manufactured in the USA and arrives on site in an easy-to-assemble design, limiting disruption to store operations.

Provides Easy Access

Decreases Load Times

Eliminates Common Surfaces

Reduces Pick Times

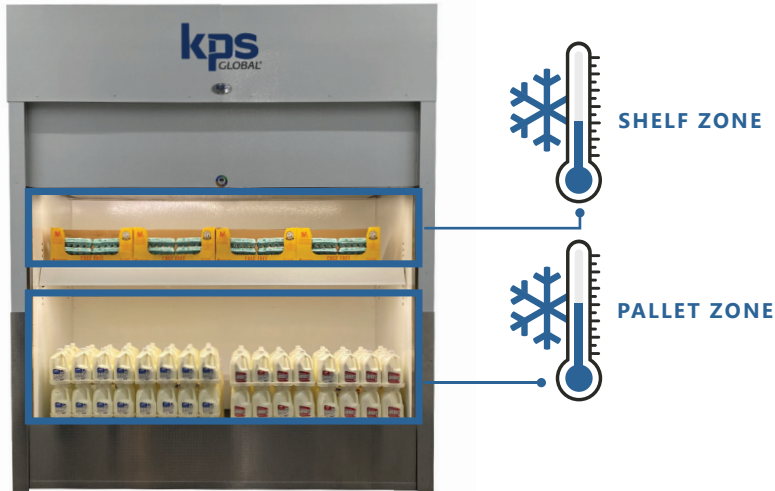

Holds Bulk Products & Prepared Foods

Improves Labor Efficiencies

TRIPLE AIR CURTAIN

Maintains two separate temperature zones in the unit, enabling packaged and bulk product to be kept at different temperatures.

VERTICAL LIFT SYSTEM

Load full pallets into the unit without the need to break down product to stock shelves, reducing labor costs.

The ACE unit is a **great option for improving labor efficiencies and reducing pick times** for eCommerce or Online Grocery Pick-up (OGP) programs where additional storage of bulk refrigerated products is needed.

Other potential applications include micro-fulfillment, pharmaceutical or 3PL.
